

NOTE: Our presentation has been delayed from tomorrow to an unknown future date (probably Tues. 12/10)

Brian Today at 4:53 PM

I am entirely unsure. We will figure something out.

- Done
 - Heman: Reason CSP failed is because of unsafe script and css elements. Merged Miranda's footer branch into main. Merged Catherine's update item branch into backend.
 - Miranda: added footers; making CSS consistent; fixed checkout button prob; worked on presentation
 - Catherine: finished delete item query & JS; did edit item query & JS, PR made & Heman merged
 - Christian: Finished addUser and removeUser forms backend and frontend, merged by Kellie, fixed additional issue with reload afterwards
 - Billy: fixed issue #67 w/ delete item JS; did signup page JS & more password security; fixed issue #68
 - Kellie: studying, some work on presentation
- To Do
 - Heman: Will clean up inline JS. Add in CSP & Close Issue #66. Write in security measures on slides.
 - Miranda: Will clean up inline CSS.
 - Catherine: UI/UX and optimization slides; if time, minifying JS and CSS
 - Christian: Remove the reason section from the checkout form. Try having an error message for a user that already exists when adding a user (low priority).
 - Billy: security checks on backend (e.g. lab access)
 - Kellie: addItem JS
 - All working on slides
