

- Done
 - Christian: no new code bc 2 exams
 - Kellie: finished writing a query, also did the one for pagination
 - Billy: worked on User and Admin homepage, profile page; DB update in reservations table; checkout form quantity cap = total stock of an item; some JS changes
 - Miranda: working on change password query in a branch off of backend; found some bugs
 - Catherine: worked on frontend optimization and made a pull request; once merged, she will pull it into the backend branch
 - frontend optimization:
 - it might be best to wait to minimize the javascript until the project is done in order to provide an easy time editing the current in-progress code
 - Catherine reverted the minification changes for now
 - Heman: exams; assigned self a query, will merge Catherine's PR
- To do
 - **Kellie**: another query coming up
 - Checkout form changes - remove signature field, adjust DB to include reason for checkout
 - main is several commits ahead of backend branch, e.g. backend branch doesn't have add & delete item forms; should make commits to bring those changes back into the backend branch
 - **Catherine** will work on this after her PR is merged, should let Christian know when done so he can make form changes
 - **Heman** will do the Sign up query, (login page should be done, will double check)
 - Various bugs, in issues
 - **Christian** will work on table highlighting CSS issue, forms (including creating edit form)
 - **Catherine** working on deleteitem query by Monday, needs to read through backend code to understand first
 - **Billy** continuing work on search and pagination for user and admin homepages
 - **Miranda**: continuing to familiarize w/ backend and writing change password query, maybe another one as well
- We need to make sure our code is well-commented
