Done:
- Christian made the checkout form on his branch (PR yet to be made)
- Billy refactored file structure on his branch - branch name: File Structure ReVmap
    - Organization is different, but the code is the same
- Heman refactored scrum logs stuff & Catherine merged it.
- Heman setup phpmyadmin on the VM

TODO:
- Christian: form for admins to edit item details
- Backend project page needs to be labeled with sprints
- Heman will test and merge in Billy's file structure branch
    - Aim is to first merge this *then* merge others' branches into main
- Good Practice Stuffs:
    - Standardize JQuery + JS
        - refactor to stop using jQuery - Catherine taking this task
    - Split up script.js into multiple .js files as required by other files
- Maybe API for email verification?
    - Heman asked Priyanka if required (she said to go to Callahan)
- Kellie was assigned another query, expected to be done by next week
