Things completed last week:
- Christian - Wrote markup, styling for general homepage
    - Buttons need to be worked on
- Catherine worked on the admin page and created the resources folder holding general javascript and css for the whole site
    - Clicking on items so far doesn't do anything
    - Miranda merged
- Billy added into the drive, a document for possible queries: ⊞ Possible Queries
    - this will serve as the "homebase" for the queries that need to be worked on
    - Info will be copied over to GitHub projects by Kellie

Things discussed today and for next time:
- Backend
    - Kellie will bring query to-do list over to github projects
    - Backend plans to meet up about how to split up the queries - will text afterwards to plan
    - Billy will create sample data on his side to add to the database
- Front-end
    - For admin so far, will not be able to check out – they would only be able to edit the inventory and see the borrowing history. We are changing it so that admin can also check things out if they wish
    - Heman making small changes on branch for validation, moving styling to external CSS, then merging Christian's PR by EOD
    - Christian and Miranda will work on getting a "fuller" blurb for the application on the homepage
    - Catherine working on admin homepage styling
