- Done
    - Miranda finished about page, made PR
        - Kellie merged
        - Can further edit in future
    - Billy made PR from Backend branch
        - Many changes are just for merge compatibility
        - User & admin pages check to see if you're logged in, if not, then it defaults back to the landing page; also, render labs
        - Fixed a css bug
            - Commented out checkout form portion
        - Navbar now in a fixed position so it's not moving from side to side w/ scrollbars
        - Decision: don't merge into main until fully functional; in future, will be branching from the backend branch
    - Christian had PR with admin forms (add/delete item)
        - Catherine merged
        - Edit item form not yet created
    - Kellie working on query; many exams this week
    - Heman was v busy with HackRPI, nothing done
    - Catherine is working on css and website performance
        - Switching to modern image formats actually worsened performance so not keeping that change
        - main thing is making css selectors more precise, still to do
        - while she is working, she's keeping in mind that somethings will be done in sql (i.e. is not optimizing code that will be deleted)
- To do
    - 6 queries remain
        - Catherine, Christian, Miranda will take some; modeling on other ones in the backend folder
    - Heman has 2 queries assigned
    - Catherine: more performance stuff
    - Kellie has queries
    - Christian: admin edit item details form
    - Billy: converting html & JS to php, focusing on checkout form functionality
        - Broken pages in branch are waiting on query from Kellie
    - Christian creating bug report about hamburger menu
    - Search bar on my labs
Billy made DB instructions .md file, is in backend branch!
